**Programs and collaborations :**

- 2014-2016 : program PICS CNRS n°6366 “ECAULT” : « Eco-Composites : damage Analysis Using Laser shock Technology » with IMP (Instytut Maszyn Przepliyowych - [www.imp.gda.pl/en/](http://www.imp.gda.pl/en/)) Gdansk, Poland, and PIMM-ParisTech.
- 2014-... : collaborative research on mechanical impact behaviour of eco-composites with IPCB (Institute for Polymers, Composites and Biomaterials - <http://www.ictmp.ct.cnr.it>), Napoli (Italy).
- 2012-... : collaborative research on mechanical behaviour of hybrid composites with Univ. La Sapienza (<http://www.uniroma1.it>), Roma, Italy.
- 2010-2011 : program ENSICHANVRE (MAPROSU CNRS) with Valagro, on the optimization of hemp fibre treatment.
- 2009-2012 : program BOREVE (ADEME) with Faurecia, MATEIS Lyon, LRMP St Etienne, IMFS-Strasbourg, FEMTO-Besançon, on material analysis for recycling the car bumpers.
- 2009-2010 : program Hemp Fibre (ACI PPRIME) with botanists of PhyMots-Univ. Poitiers, on influence of cultural conditions on mechanical properties of hemp fibres.
- 2007-2010 : program COMPOCHANVRE (Region) with CRITT Rochefort, Valagro, botanists of PhyMots-Univ. Poitiers, on mechanical behaviour of hemp/epoxy composite.
- 2005-... : invited researcher Dr. Min Shen in 2005 from Univ of Tianjin (<http://www.tju.edu.cn/english/>) China, pursuing collaborative research on mechanical behaviour of wood polymer composites.
- 2004-2007 : program RECYPRO (ACI Ministère) on mechanical behaviour of recycled polymers with MATEIS Lyon, LRMP St Etienne, IMFS-Strasbourg, FEMTO-Besançon.
- 2002-2004 : program AGRICE (ADEME-CNRS) with Hutchinson, on flexural behaviour of hemp/glass/PU sandwich materials.
- 2000-2002 : program AGRICE (ADEME-CNRS) with Valagro, on microstructural and mechanical study of wood/PA composites.

## Context :

Global awareness of environmental issues has resulted in the emergence of “green” materials. These new materials offer eco-friendly and sustainable alternatives to classical ones, but their mechanical behaviour is not well known yet. The aim of this research topic is to analyse damage and strain mechanisms in recycled polymers and plant fibre composites, under different types of mechanical loading. For this purpose, multi-instrumented experimental tests are performed, at different scales of the studied materials. In particular, a specific attention is paid to the fibre/matrix interface characterization, which is a key-point for numerical modelling of composite behaviour.

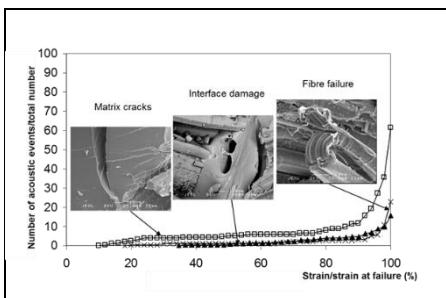

## Studied materials

- ✓ Recycled or bio-sourced polymers.
- ✓ Plant fibre composites (hemp, flax, wood or straw reinforcement).
- ✓ Short fibres, medium fibres (non-woven mat), or long fibres (unidirectional ply or woven fabric) composites.
- ✓ Hybrid composites (basalt-carbon, flax-carbon).
- ✓ Thermoset or thermoplastic matrix.

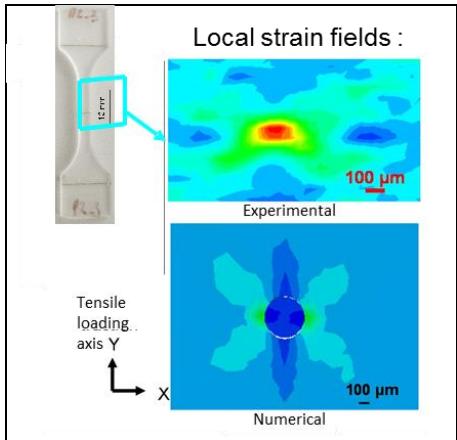

## Analysis of damage, strain and failure mechanisms

- ✓ Fatigue and post-impact fatigue behaviour of hemp/epoxy composites.
- ✓ Determination of fatigue criterion for eco-composites.
- ✓ Tensile, fracture and impact behaviour of wood/PP, flax/PLA, hemp/epoxy composites.
- ✓ Full-field strain measurements by Digital Image Correlation (DIC) technique.
- ✓ Damage evolution analysis by coupling X-ray microtomography and acoustic emission methods.
- ✓ Material characterisation by using DSC, DMA, WAXS, optical and electron microscopy.
- ✓ Analytical and finite element modelling of eco-composite mechanical behaviour.
- ✓ Effect of stacking sequence, processing conditions, fibre quality, fibre length and ratio.
- ✓ Influence of ageing (thermal, moisture...).
- ✓ Properties of recycled polymers and recycled reinforced polymers.
- ✓ Comparison with classical composites (carbon and glass fibres).

## Experimental and numerical characterisation of fibre/matrix interface behaviour

- ✓ Development of single-yarn samples, with different yarn orientations ( $0^\circ$ ,  $45^\circ$  and  $90^\circ$ ).
- ✓ Conception of adapted micro-machine test.
- ✓ Determination of IFSS by fragmentation testing on hemp/epoxy interface.

- ✓ Experimental strain and stress field measurements by using Digital Image Correlation (DIC) and photoelasticimetry methods.
- ✓ Analysis of local constitutive law.
- ✓ Numerical simulations at different scales.
- ✓ Application of laser shock technique for interface testing.
- ✓ Influence of water sorption.
- ✓ Comparison of synthetic and bio-sourced polymer matrices.
